

The Tunnel Statistics 2020

26th of November 2020

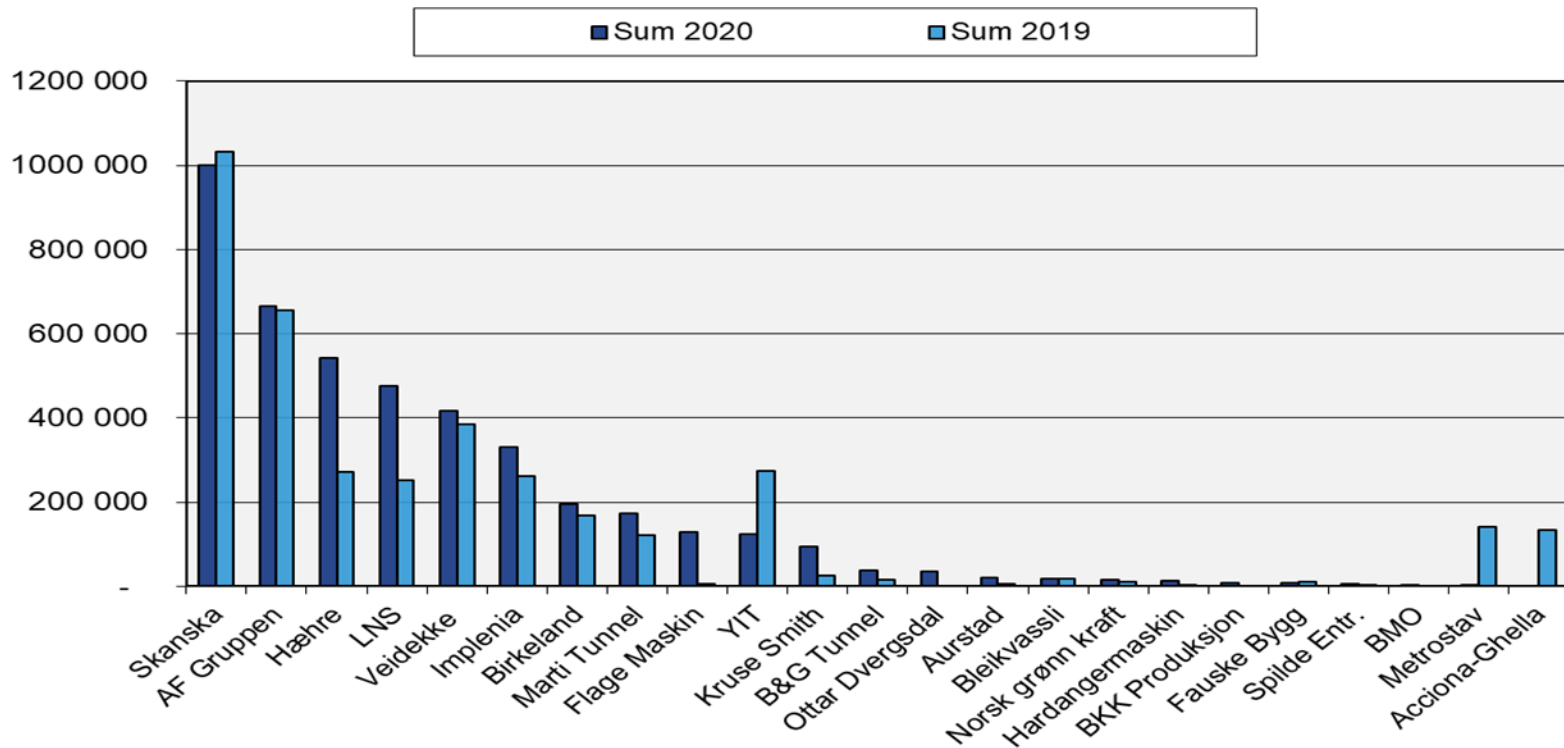

A small increase from 2019 to 2020, and over 4,3 mill fm³ was excavated in 2020

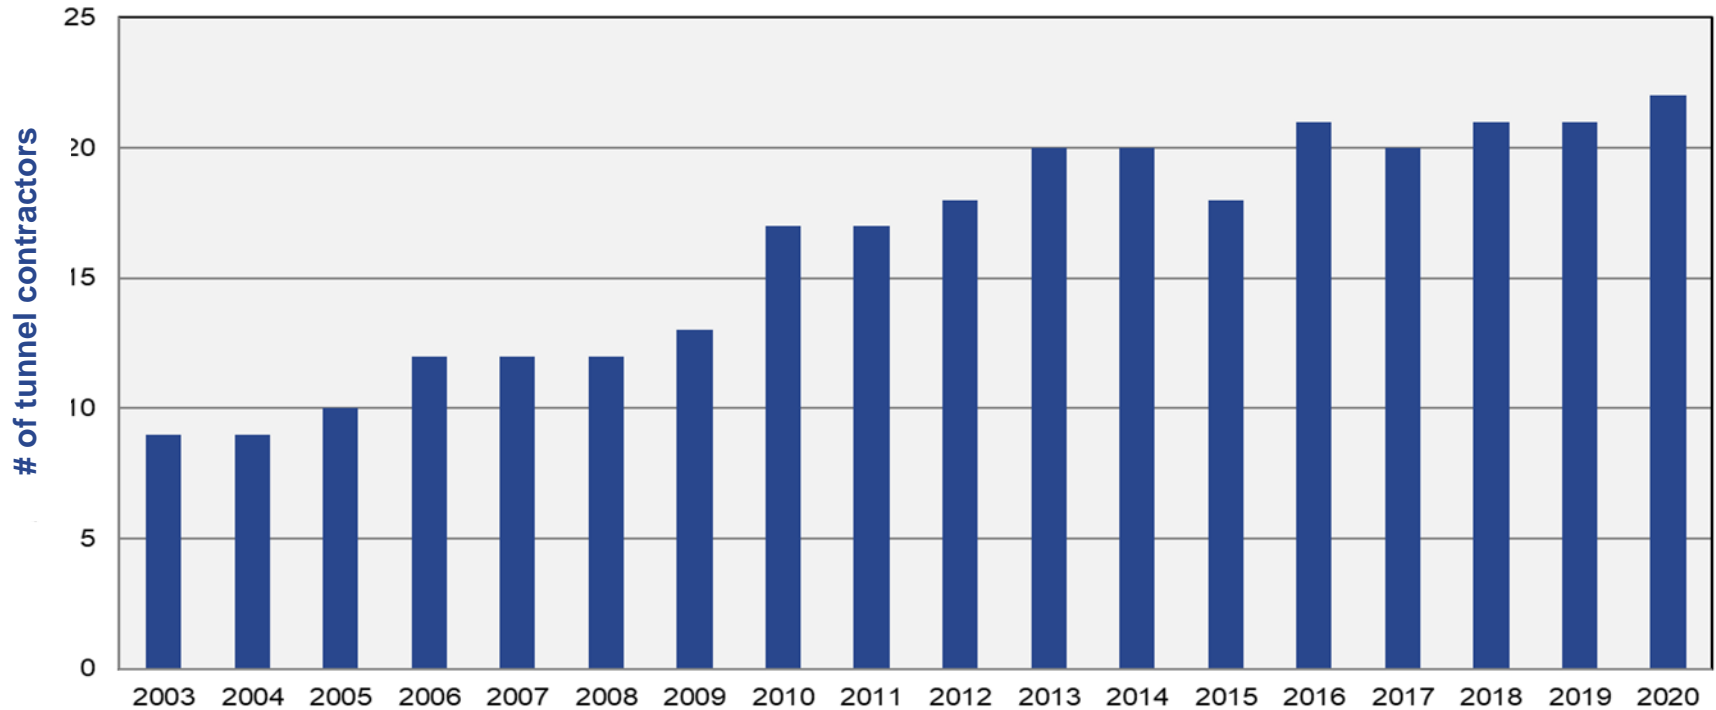

About half of the volume (2 mill fm³) on road, and about 0,7 mill fm³ within both railroad and hydro power

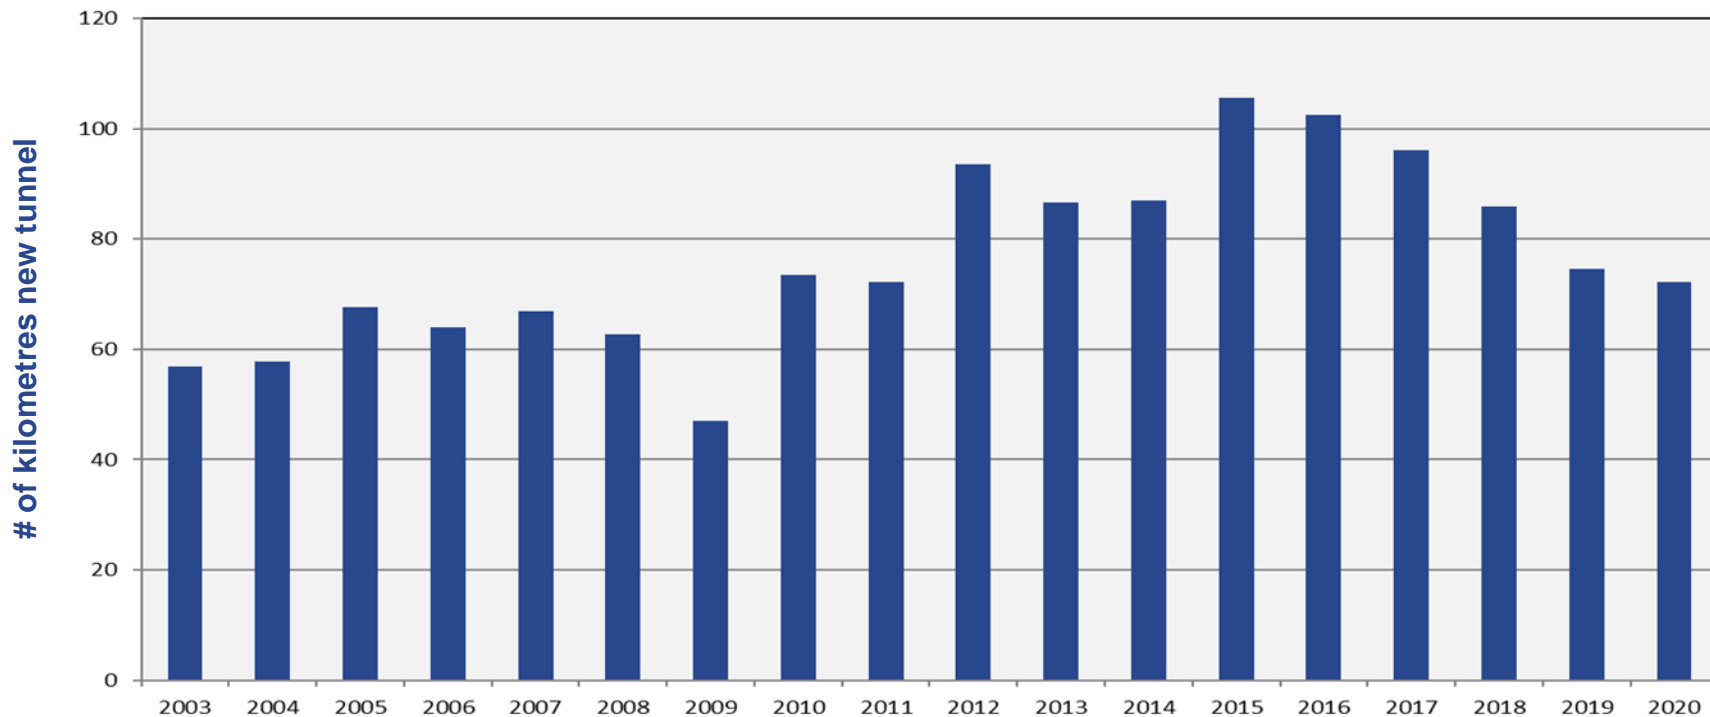

Skanska is still on top and the order has changed for several of the largest contractors

The number of tunnel contractors is stable, but this years contractors are a bit different than the ones from last year

The decrease in metres new tunnel continues in spite of higher volume, due to two shafts with large cross sections

A small increase in number of metres excavated with TBM, this is due to three small TBMs within hydropower projects
